## 3．2 Decidability

Outline
（1）Introduction
（2）Decidable Languages
－Decidable Problems Concerning Regular Languages
－Decidable Problems Concerning Context－free Languages
（3）Undecidability
－The Diagonalization Method
－An Undecidable Language
－A Turing－unrecognizable Language

## 3．2 Decidability

Outline
（1）Introduction
（2）Decidable Languages
－Decidable Problems Concerning Regular Languages
－Decidable Problems Concerning Context－free Languages
（3）Undecidability
－The Diagonalization Method
－An Undecidable Language
－A Turing－unrecognizable Language

## 3．2 Decidability

Introduction

回顾：问：Why introducing Turing machine？
答：Prove that some problem cannot be solved algorithmically，i．e．， Hilbert＇s 10th problem

问：How？
答：Determine the Decidability
问：Why studying unsolvability？
答： 2 reasons
－You realize that the unsolvable problem must be simplified or altered before you can find an algorithmic solution
－Culture：stimulate your imagination and help you gain an important perspective on computation

## 3．2 Decidability

## 3．2 Decidability

1．Decidable Languages

问：How to study the Decidability of problems？
答：Study the Decidability of the languages
问：Then？
答：Firstly，which are decidable？；Then，which are not？
问：Any examples of decidable language？
答：Let＇s play with Regular language，context－free language，
问：How to play？
答：Firstly，formally define the problem，i．e．，the language．Then prove the language is decidable

## 3．2 Decidability

（3）Undecidability
－The Diagonalization Method
－An Undecidable Language
－A Turing－unrecognizable Language

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\mathrm{DFA}}$

The language $A_{\mathrm{DFA}}$ is decidable，where

$$
A_{\mathrm{DFA}}=\{\langle B, w\rangle \mid B \text { is a DFA that accepts input string } w\}
$$

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\text {DFA }}$

The language $A_{\mathrm{DFA}}$ is decidable，where

$$
A_{\mathrm{DFA}}=\{\langle B, w\rangle \mid B \text { is a DFA that accepts input string } w\}
$$

## 证明思路（Proof by Construction）

We simply need to present a TM $M$ that decides $A_{\mathrm{DFA}}$ ． $M=$＂On input $\langle B, w\rangle$ ，where $B$ is a DFA and $w$ is a string：
（1）Simulate $B$ on input $w$ ．
（2）If the simulation ends in
－an accept state：accept
－a non－accepting state：reject

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\text {DFA }}$

The language $A_{\mathrm{DFA}}$ is decidable，where

$$
A_{\mathrm{DFA}}=\{\langle B, w\rangle \mid B \text { is a DFA that accepts input string } w\}
$$

## 证明（Proof by Construction）

First，examine the input $\langle B, w\rangle$ ．
－Proper representation：
－$B$ is simply a list of its five components：$Q, \Sigma, \delta, q_{0}$ ，and $F$
－When $M$ receives its input，$M$ first determines whether it properly represents a DFA $B$ and a string $w$ ．

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\text {DFA }}$

The language $A_{\mathrm{DFA}}$ is decidable，where

$$
A_{\mathrm{DFA}}=\{\langle B, w\rangle \mid B \text { is a DFA that accepts input string } w\}
$$

## 证明（Proof by Construction）

First，examine the input $\langle B, w\rangle$ ．
－Proper representation：
－$B$ is simply a list of its five components：$Q, \Sigma, \delta, q_{0}$ ，and $F$
－When $M$ receives its input，$M$ first determines whether it properly represents a DFA $B$ and a string $w$ ．

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\text {DFA }}$

The language $A_{\mathrm{DFA}}$ is decidable，where

$$
A_{\mathrm{DFA}}=\{\langle B, w\rangle \mid B \text { is a DFA that accepts input string } w\}
$$

## 证明（Proof by Construction）

First，examine the input $\langle B, w\rangle$ ．
－Proper representation：
－$B$ is simply a list of its five components：$Q, \Sigma, \delta, q_{0}$ ，and $F$
－When $M$ receives its input，$M$ first determines whether it properly represents a DFA $B$ and a string $w$ ．
－If not，$M$ rejects．

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\text {DFA }}$

The language $A_{\mathrm{DFA}}$ is decidable，where

$$
A_{\mathrm{DFA}}=\{\langle B, w\rangle \mid B \text { is a DFA that accepts input string } w\}
$$

## 证明（Proof by Construction）

Then $M$ carries out the simulation directly

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\text {DFA }}$

The language $A_{\mathrm{DFA}}$ is decidable，where

$$
A_{\mathrm{DFA}}=\{\langle B, w\rangle \mid B \text { is a DFA that accepts input string } w\}
$$

## 证明（Proof by Construction）

Then $M$ carries out the simulation directly
－思路：It keeps track of $B^{\prime}$ s current state and $B^{\prime}$ s current position in the input $w$ by writing this information down on its tape．

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\mathrm{DFA}}$

The language $A_{\mathrm{DFA}}$ is decidable，where

$$
A_{\mathrm{DFA}}=\{\langle B, w\rangle \mid B \text { is a DFA that accepts input string } w\}
$$

## 证明（Proof by Construction）

Then $M$ carries out the simulation directly
－Initially，$B^{\prime}$ s current state is $q_{0}$ and $B^{\prime}$ s current input position is the leftmost symbol of $w$ ．
－The states and position are updated according to the specified transition function $\delta$ ．
－When $M$ finishes processing the last symbol of $w$ ，
－$M$ accepts the input if $B$ is in an accepting state
－$M$ rejects the input if $B$ is in a nonaccepting state．

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\mathrm{DFA}}$

The language $A_{\mathrm{DFA}}$ is decidable，where

$$
A_{\mathrm{DFA}}=\{\langle B, w\rangle \mid B \text { is a DFA that accepts input string } w\}
$$

## 证明（Proof by Construction）

Then $M$ carries out the simulation directly
－Initially，$B^{\prime}$ s current state is $q_{0}$ and $B^{\prime}$ s current input position is the leftmost symbol of $w$ ．
－The states and position are updated according to the specified transition function $\delta$ ．
> －When M finishes processing the last symbol of $w$ ，
> －$M$ accepts the input if $B$ is in an accepting state
> －$M$ reiects the input if $B$ is in a nonaccepting state．

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\mathrm{DFA}}$

The language $A_{\mathrm{DFA}}$ is decidable，where

$$
A_{\mathrm{DFA}}=\{\langle B, w\rangle \mid B \text { is a DFA that accepts input string } w\}
$$

## 证明（Proof by Construction）

Then $M$ carries out the simulation directly
－Initially，$B^{\prime}$ s current state is $q_{0}$ and $B^{\prime}$ s current input position is the leftmost symbol of $w$ ．
－The states and position are updated according to the specified transition function $\delta$ ．
－When $M$ finishes processing the last symbol of $w$ ，
－$M$ accepts the input if $B$ is in an accepting state
－$M$ rejects the input if $B$ is in a nonaccepting state．

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\mathrm{NFA}}$

The language $A_{\mathrm{NFA}}$ is decidable，where
$A_{\mathrm{NFA}}=\{\langle B, w\rangle \mid B$ is an NFA that accepts input string $w\}$

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\text {NFA }}$

The language $A_{\text {NFA }}$ is decidable，where
$A_{\text {NFA }}=\{\langle B, w\rangle \mid B$ is an NFA that accepts input string $w\}$

## 证明：Proof by Construction <br> Present a TM $N$ that decides $A_{\text {NFA }}$

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\text {NFA }}$

The language $A_{\text {NFA }}$ is decidable，where

$$
A_{\mathrm{NFA}}=\{\langle B, w\rangle \mid B \text { is an NFA that accepts input string } w\}
$$

## 证明：Proof by Construction

Present a TM $N$ that decides $A_{\text {NFA }}$

- 方法 1：Operate like $\underline{M}$
- 方法 2：New idea：Have $N$ use $\underline{M}$ as a subroutine
－$N$ converts the $N F A$ it receives as input to a DFA
－Pass the DFA and $w$ to $M$

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\text {NFA }}$

The language $A_{\mathrm{NFA}}$ is decidable，where

$$
A_{\mathrm{NFA}}=\{\langle B, w\rangle \mid B \text { is an NFA that accepts input string } w\}
$$

## 证明：Proof by Construction

Present a TM $N$ that decides $A_{\text {NFA }}$

- 方法 1：Operate like $M$
- 方法 2：New idea：Have $N$ use $\underline{M}$ as a subroutine
－$N$ converts the NFA it receives as input to a DFA
－Pass the DFA and $w$ to $\underline{M}$

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\text {NFA }}$

The language $A_{\mathrm{NFA}}$ is decidable，where

$$
A_{\mathrm{NFA}}=\{\langle B, w\rangle \mid B \text { is an NFA that accepts input string } w\}
$$

## 证明：Proof by Construction

Present a TM $N$ that decides $A_{\text {NFA }}$
$N=$＂On input $\langle B, w\rangle$ ，where $B$ is an NFA and $w$ is a string：
（1）Convert NFA $B$ to an equivalent DFA $C$
（2）Run TM $\underline{M}$ on input $\langle C, w\rangle$
（3）If $\underline{M}$ accepts，accept；otherwise，reject．＂

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\text {REX }}$

The language $A_{\text {REX }}$ is decidable，where
$A_{\text {REX }}=\{\langle R, w\rangle \mid R$ is a regular expression that generates string $w\}$

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $A_{\text {REX }}$

The language $A_{\text {REX }}$ is decidable，where
$A_{\text {REX }}=\{\langle R, w\rangle \mid R$ is a regular expression that generates string $w\}$

## 证明

The following TM $P$ decides $A_{\text {REX }}$
$P=$＂On input $\langle R, w\rangle$ ，where $R$ is a regular expression and $w$ is a string：
（1）Convert regular expression $R$ to an equivalent NFA $A$
（2）Run TM $\underline{N}$ on input $\langle A, w\rangle$ ．
（3）If $\underline{N}$ accepts，accept；if $\underline{N}$ rejects，reject．＂

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $E_{\text {DFA }}$

The language $E_{\mathrm{DFA}}$ is decidable，where

$$
E_{\mathrm{DFA}}=\{\langle A\rangle \mid A \text { is a DFA and } L(A)=\emptyset\}
$$

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $E_{\mathrm{DFA}}$

The language $E_{\mathrm{DFA}}$ is decidable，where

$$
E_{\mathrm{DFA}}=\{\langle A\rangle \mid A \text { is a DFA and } L(A)=\emptyset\}
$$

## 证明（Proof by Construction）

Design a TM $T$
$T=$＂On input $\langle A\rangle$ ，where $A$ is a DFA：
（1）Mark the start state of $A$
（2）Repeat until no new states get marked
（3）Mark any state that has a transition coming into it from any state that is already marked．
（9）If no accept state is marked，accept；otherwise，reject．＂

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $E Q_{\mathrm{DFA}}$

The language $E Q_{\mathrm{DFA}}$ is decidable，where

$$
E Q_{\mathrm{DFA}}=\{\langle A, B\rangle \mid A \text { and } B \text { are DFAs and } L(A)=L(B)\}
$$

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $E Q_{\mathrm{DFA}}$

The language $E Q_{\text {DFA }}$ is decidable，where

$$
E Q_{\mathrm{DFA}}=\{\langle A, B\rangle \mid A \text { and } B \text { are DFAs and } L(A)=L(B)\}
$$

## 准备：Construct a DFA C

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $E Q_{\mathrm{DFA}}$

The language $E Q_{\text {DFA }}$ is decidable，where

$$
E Q_{\mathrm{DFA}}=\{\langle A, B\rangle \mid A \text { and } B \text { are DFAs and } L(A)=L(B)\}
$$

## 准备：Construct a DFA $C$

－The language of $C$ is

$$
L(C)=(L(A) \cap \overline{L(B)}) \cup(\overline{L(A)} \cap L(B))
$$

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $E Q_{\text {DFA }}$

The language $E Q_{\mathrm{DFA}}$ is decidable，where

$$
E Q_{\mathrm{DFA}}=\{\langle A, B\rangle \mid A \text { and } B \text { are DFAs and } L(A)=L(B)\}
$$

## 准备：Construct a DFA $C$

－The language of $C$ is

$$
L(C)=(L(A) \cap \overline{L(B)}) \cup(\overline{L(A)} \cap L(B))
$$

－Prove class of regular languages closed under complementation， union，and intersection．So $C$ can be a DFA．
－DFA $C$ can be constructed by a TM
$\square$

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $E Q_{\text {DFA }}$

The language $E Q_{\text {DFA }}$ is decidable，where

$$
E Q_{\mathrm{DFA}}=\{\langle A, B\rangle \mid A \text { and } B \text { are DFAs and } L(A)=L(B)\}
$$

## 准备：Construct a DFA $C$

－The language of $C$ is

$$
L(C)=(L(A) \cap \overline{L(B)}) \cup(\overline{L(A)} \cap L(B))
$$

－Prove class of regular languages closed under complementation， union，and intersection．So $C$ can be a DFA．
－DFA $C$ can be constructed by a TM

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $E Q_{\text {DFA }}$

The language $E Q_{\text {DFA }}$ is decidable，where

$$
E Q_{\mathrm{DFA}}=\{\langle A, B\rangle \mid A \text { and } B \text { are DFAs and } L(A)=L(B)\}
$$

## 准备：Construct a DFA $C$

－The language of $C$ is

$$
L(C)=(L(A) \cap \overline{L(B)}) \cup(\overline{L(A)} \cap L(B))
$$

－Prove class of regular languages closed under complementation， union，and intersection．So $C$ can be a DFA．
－DFA $C$ can be constructed by a TM
－$L(C)=\emptyset$ iff $L(A)=L(B)$

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Regular Languages

## 定理：Decidability of $E Q_{\text {DFA }}$

The language $E Q_{\text {DFA }}$ is decidable，where

$$
E Q_{\mathrm{DFA}}=\{\langle A, B\rangle \mid A \text { and } B \text { are DFAs and } L(A)=L(B)\}
$$

## 证明（Proof by Construction）

$F=$＂On input $\langle A, B\rangle$ ，where $A$ and $B$ are DFAs：
（1）Construct DFA $\underline{C}$ as described
（2）Run TM $\underline{T}$ on input $\langle C\rangle$
（3）If $T$ accepts，accept．If $T$ rejects，reject．＂

## 3．2 Decidability

Outline
（1）Introduction
（2）Decidable Languages
－Decidable Problems Concerning Regular Languages
－Decidable Problems Concerning Context－free Languages
（3）Undecidability
－The Diagonalization Method
－An Undecidable Language
－A Turing－unrecognizable Language

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Context－free Languages

## 定理：Decidability of $A_{\mathrm{CFG}}$

The language $A_{\mathrm{CFG}}$ is decidable，where

$$
A_{\mathrm{CFG}}=\{\langle G, w\rangle \mid G \text { is a CFG that generates string } w\}
$$

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Context－free Languages

## 定理：Decidability of $A_{\mathrm{CFG}}$

The language $A_{\mathrm{CFG}}$ is decidable，where

$$
A_{\mathrm{CFG}}=\{\langle G, w\rangle \mid G \text { is a CFG that generates string } w\}
$$

## 证明思路

## 可选方案：

（1）use $G$ to go through all derivations to determine whether any is a derivation of $w$ ．
－This idea doesn＇$t$ work，as infinitely many derivations may have to be tried
－If $G$ does not generate $w$ ，this algorithm would never halt．
（2）ensure that the algorithm tries only finitely many derivations
－Convert $G$ into Chomsky normal form
－anv derivation of $w$ has $2 n-1$ steps

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Context－free Languages

## 定理：Decidability of $A_{\mathrm{CFG}}$

The language $A_{\mathrm{CFG}}$ is decidable，where

$$
A_{\mathrm{CFG}}=\{\langle G, w\rangle \mid G \text { is a CFG that generates string } w\}
$$

## 证明思路

## 可选方案：

（1）use $G$ to go through all derivations to determine whether any is a derivation of $w$ ．
－This idea doest $t$ work，as infinitely many derivations may have to be
－If $G$ does not generate $w$ ，this algorithm would never halt．
（2）ensure that the algorithm tries only finitely many derivations
－Convert $G$ into Chomsky normal form
－any derivation of $w$ has $2 n-1$ steps

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Context－free Languages

## 定理：Decidability of $A_{\mathrm{CFG}}$

The language $A_{\mathrm{CFG}}$ is decidable，where

$$
A_{\mathrm{CFG}}=\{\langle G, w\rangle \mid G \text { is a CFG that generates string } w\}
$$

## 证明（Proof by Construction）

The TM $S$ for $A_{\mathrm{CFG}}$ follows．
$S=$＂On input $\langle G, w\rangle$ ，where $G$ is a CFG and $w$ is a string：
（1）Convert $G$ to an equivalent grammar in Chomsky normal form．
（2）List all derivations with $2 n-1$ steps，where $n$ is the length of $w$ ； except if $n=0$ ，then instead list all derivations with one step．
（3）If any of these derivations generate $w$ ，accept；if not，reject．＂

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Context－free Languages

## 定理：Decidability of $E_{\mathrm{CFG}}$

The language $E_{\mathrm{CFG}}$ is decidable，where

$$
E_{\mathrm{CFG}}=\{\langle G\rangle \mid G \text { is a CFG and } L(G)=\emptyset\}
$$

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Context－free Languages

## 定理：Decidability of $E_{\mathrm{CFG}}$

The language $E_{\mathrm{CFG}}$ is decidable，where

$$
E_{\mathrm{CFG}}=\{\langle G\rangle \mid G \text { is a CFG and } L(G)=\emptyset\}
$$

## 证明思路

可选方案：
## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Context－free Languages

## 定理：Decidability of $E_{\mathrm{CFG}}$

The language $E_{\mathrm{CFG}}$ is decidable，where

$$
E_{\mathrm{CFG}}=\{\langle G\rangle \mid G \text { is a CFG and } L(G)=\emptyset\}
$$

## 证明思路

可选方案： use TM $\underline{S}$－It states that we can test whether a CFG generates some particular string $w$ ．
－The algorithm might try going through all possible w＇s，one by one
－there are infinitely many $w^{\prime}$ s to try

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Context－free Languages

## 定理：Decidability of $E_{\mathrm{CFG}}$

The language $E_{\mathrm{CFG}}$ is decidable，where

$$
E_{\mathrm{CFG}}=\{\langle G\rangle \mid G \text { is a CFG and } L(G)=\emptyset\}
$$

## 证明思路

可选方案： use TM $\underline{S}$－It states that we can test whether a CFG generates some particular string $w$ ．
－The algorithm might try going through all possible $w^{\prime} s$ ，one by one
－there are infinitely many $w^{\prime} \mathrm{s}$ to try

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Context－free Languages

## 定理：Decidability of $E_{\mathrm{CFG}}$

The language $E_{\mathrm{CFG}}$ is decidable，where

$$
E_{\mathrm{CFG}}=\{\langle G\rangle \mid G \text { is a CFG and } L(G)=\emptyset\}
$$

## 证明思路

可选方案： use TM $\underline{S}$－It states that we can test whether a CFG generates some particular string $w$ ．
－The algorithm might try going through all possible $w^{\prime} \mathrm{s}$ ，one by one

## 可选方案：

Propagate from terminal symbols
－First，the algorithm marks all the terminal symbols in the grammar
－Then，it scans all the rules of the grammar
－If it ever finds a rule that permits some variable to be replaced by some string of symbols，all of which are already marked，the algorithm knows that this variable can be marked，too

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Context－free Languages

## 定理：Decidability of $E_{\mathrm{CFG}}$

The language $E_{\mathrm{CFG}}$ is decidable，where

$$
E_{\mathrm{CFG}}=\{\langle G\rangle \mid G \text { is a CFG and } L(G)=\emptyset\}
$$

## 证明（Proof by Construction）

$R=$＂On input $\langle G\rangle$ ，where $G$ is a CFG：
（1）Mark all terminal symbols in $G$
（2）Repeat until no new variables get marked：
（3）Mark any variable $A$ where $G$ has a rule $A \rightarrow U_{1} U_{2} \cdots U_{k}$ and each symbol $U_{1}, \ldots, U_{k}$ has already been marked
（9）If the start variable is not marked，accept；otherwise，reject．＂

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Context－free Languages

## 问题：Decidability of $E Q_{\text {CFG }}$

Is the language $E Q_{\mathrm{CFG}}$ decidable？

$$
E Q_{\mathrm{CFG}}=\{\langle G, H\rangle \mid G \text { and } H \text { are CFGs and } L(G)=L(H)\} .
$$

答：No！
问：Why not designing a TM similar to TM $\underline{F}$ ？
答：The design of $F$ depends on closure property under complementation or intersection

问：How to prove that $E Q_{\mathrm{CFG}}$ is not decidable？
答：See Chap 3．3 Reducibility．

## 3．2 Decidability

1．Decidable Languages｜Decidable Problems Concerning Context－free Languages

## 问题：Decidability of $E Q_{\text {CFG }}$

Is the language $E Q_{\mathrm{CFG}}$ decidable？

$$
E Q_{\mathrm{CFG}}=\{\langle G, H\rangle \mid G \text { and } H \text { are CFGs and } L(G)=L(H)\} .
$$

## 答：No！

问：Why not designing a TM similar to TM $\underline{F}$ ？
答：The design of $F$ depends on closure property under complementation or intersection

问：How to prove that $E Q_{\mathrm{CFG}}$ is not decidable？
答：See Chap 3．3 Reducibility．

## 3．2 Decidability

$$
f(a)=b
$$

－correspondence，or bijective：both one－to－one and onto
Say that $A$ and $B$ have the same size if there is a correspondence function $f: A \rightarrow B$ ．

## 例：same size

Let $\mathcal{N}$ be the set of natural numbers $\{1,2,3, \ldots\}$
Let $\mathcal{E}$ be the set of even natural numbers $\{2,4,6, \ldots\}$
$\mathcal{N}$ and $\mathcal{E}$ have the same size

## 3．2 Decidability

2．Undecidability｜The Diagonalization Method

## 定义：countable

A set $A$ is countable if either it is finite or it has the same size as $\mathcal{N}$

## 3．2 Decidability

2．Undecidability｜The Diagonalization Method

## 定义：countable

A set $A$ is countable if either it is finite or it has the same size as $\mathcal{N}$

## 例

Let $Q=\left\{\left.\frac{m}{n} \right\rvert\, m, n \in \mathcal{N}\right\}, Q$ is countable

## 3．2 Decidability

2．Undecidability｜The Diagonalization Method

## 定理：uncountable of $\mathcal{R}$

$\mathcal{R}$ is uncountable， where $\mathcal{R}$ is the set of real numbers，e．g．，$\pi=3.14 \ldots, \sqrt{2}=1.414 \ldots$

## 3．2 Decidability

2．Undecidability｜The Diagonalization Method

## 定理：uncountable of $\mathcal{R}$

$\mathcal{R}$ is uncountable， where $\mathcal{R}$ is the set of real numbers，e．g．，$\pi=3.14 \ldots, \sqrt{2}=1.414 \ldots$

证明：（Proof by Contradiction）

## 3．2 Decidability

2．Undecidability｜The Diagonalization Method

## 定理：uncountable of $\mathcal{R}$

$\mathcal{R}$ is uncountable， where $\mathcal{R}$ is the set of real numbers，e．g．，$\pi=3.14 \ldots, \sqrt{2}=1.414 \ldots$

## 证明：（Proof by Contradiction）

－Suppose that a correspondence $f$ existed between $\mathcal{N}$ and $\mathcal{R}$

## 3．2 Decidability

2．Undecidability｜The Diagonalization Method

## 定理：uncountable of $\mathcal{R}$

$\mathcal{R}$ is uncountable， where $\mathcal{R}$ is the set of real numbers，e．g．，$\pi=3.14 \ldots, \sqrt{2}=1.414 \ldots$

## 证明：（Proof by Contradiction）

－Suppose that a correspondence $f$ existed between $\mathcal{N}$ and $\mathcal{R}$
－Find an $x$ in $\mathcal{R}$ that is not paired with anything in $\mathcal{N}$

## 3．2 Decidability

2．Undecidability｜The Diagonalization Method

## 定理：uncountable of $\mathcal{R}$

$\mathcal{R}$ is uncountable， where $\mathcal{R}$ is the set of real numbers，e．g．，$\pi=3.14 \ldots, \sqrt{2}=1.414 \ldots$

## 证明：（Proof by Contradiction）

－Suppose that a correspondence $f$ existed between $\mathcal{N}$ and $\mathcal{R}$
－In other words，ensure that $x \neq f(n)$ for any $n$

## 3．2 Decidability

2．Undecidability｜The Diagonalization Method

## 定理：uncountable of $\mathcal{R}$

$\mathcal{R}$ is uncountable， where $\mathcal{R}$ is the set of real numbers，e．g．，$\pi=3.14 \ldots, \sqrt{2}=1.414 \ldots$

## 证明：（Proof by Contradiction）

－Suppose that a correspondence $f$ existed between $\mathcal{N}$ and $\mathcal{R}$
－Let the $n$th fractional digit of $x$ be anything different from the $n t h$ fractional digit of $f(n)$

| $n$ | $f(n)$ |  |
| :---: | ---: | :--- |
| 1 | $3.14159 \ldots$ |  |
| 2 | $55.5 \underline{5} 555 \ldots$ |  |
| 3 | $0.12 \underline{3} 45 \ldots$ | $x=0.4641 \ldots$ |
| 4 | $0.500 \underline{0} 0 \ldots$ |  |

## 3．2 Decidability

2．Undecidability｜A Turing－unrecognizable Language
总结
－定义：
－one－to－one，onto，same size，correspondence
－countable，co－Turing－recognizable
－定理：
－uncountable of $\mathcal{R}$
－decidable $\equiv$ Turing－recognizable $\wedge$ co－Turing－recognizable
－推论：
－Some languages are not Turing－recognizable
－Decidable：
－$A_{\mathrm{DFA}}, A_{\mathrm{NFA}}, A_{\mathrm{REX}}, \underline{E_{\mathrm{DFA}}}, E Q_{\mathrm{DFA}}$
－$\overline{A_{\mathrm{CFG}}}, \overline{E_{\mathrm{CFG}}}, \overline{\text { every }}$ context－free language
－Recognizable：$A_{\mathrm{TM}}$
－Undecidable：$\underline{E Q_{\mathrm{CFG}}}$（Not proved yet），$\underline{A_{\mathrm{TM}}}$
－Turing－unrecognizable：$\overline{A_{\mathrm{TM}}}$

## 作业

4．1 Answer all parts for the following DFA $M$ and give reasons for your answers．

a．Is $\langle M, 0100\rangle \in A_{\text {DFA }}$ ？
d．Is $\langle M, 0100\rangle \in A_{\text {REX }}$ ？
b．Is $\langle M, 011\rangle \in A_{\mathrm{DFA}}$ ？
e．Is $\langle M\rangle \in E_{\mathrm{DFA}}$ ？
c．Is $\langle M\rangle \in A_{\mathrm{DFA}}$ ？
f．Is $\langle M, M\rangle \in E Q_{\text {DFA }}$ ？

4．3 Let $A L L_{\mathrm{DFA}}=\left\{\langle A\rangle \mid A\right.$ is a DFA and $\left.L(A)=\Sigma^{*}\right\}$ ．Show that $A L L_{\mathrm{DFA}}$ is decidable．

## 作业

4．6 Let $X$ be the set $\{1,2,3,4,5\}$ and $Y$ be the set $\{6,7,8,9,10\}$ ．We describe the functions $f: X \longrightarrow Y$ and $g: X \longrightarrow Y$ in the following tables．Answer each part and give a reason for each negative answer．

| $n$ | $f(n)$ |
| :---: | :---: |
| 1 | 6 |
| 2 | 7 |
| 3 | 6 |
| 4 | 7 |
| 5 | 6 |

| $n$ | $g(n)$ |
| :---: | :---: |
| 1 | 10 |
| 2 | 9 |
| 3 | 8 |
| 4 | 7 |
| 5 | 6 |

A．Is $f$ one－to－one？
b．Is $f$ onto？
${ }^{\text {A }} \mathbf{d}$ ．Is $g$ one－to－one？
e．Is $g$ onto？
c．Is $f$ a correspondence？

4．7 Let $\mathcal{B}$ be the set of all infinite sequences over $\{0,1\}$ ．Show that $\mathcal{B}$ is uncountable using a proof by diagonalization．
