

## Install and Configure

MySQL is an **open-source relational** database management system (RDBMS).

Install (manual, recommend): take the windows computer as example, other systems are similar.

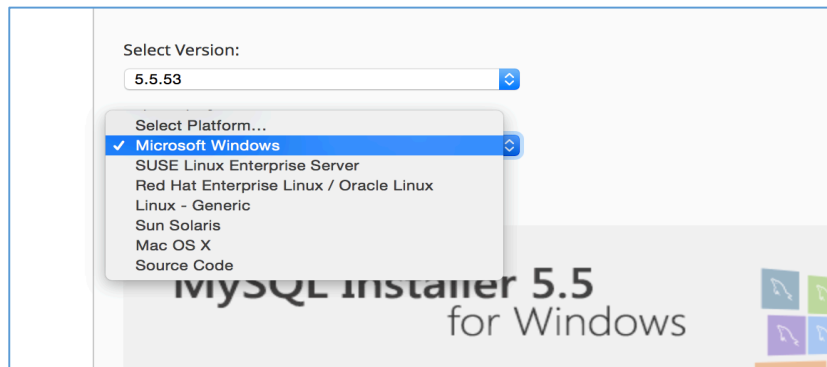

### 1.Download the right versions for MySQL server and MySQL workbench.

MySQL Workbench is a unified visual tool for database architects, developers, and DBAs.

MySQL server download: <https://dev.mysql.com/downloads/mysql/>

MySQL workbench download: <http://dev.mysql.com/downloads/workbench/>

Please select the right version according to your system, for example:

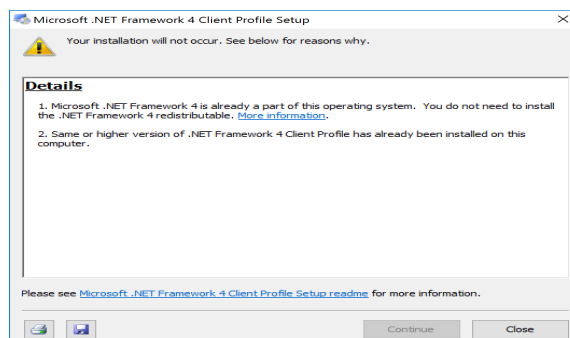

Please note that: for installing workbench:

MySQL Workbench Windows Prerequisites:

To be able to install and run MySQL Workbench on Windows your system needs to have libraries listed below installed. The listed items are provided as links to the corresponding download pages where you can fetch the necessary files.

- [Microsoft .NET Framework 4 Client Profile](#)
- [Visual C++ Redistributable for Visual Studio 2013](#)

If your computer does not have these libraries, you can install them first (<http://dev.mysql.com/downloads/workbench/>), for example: try to install the .NET framework 4,

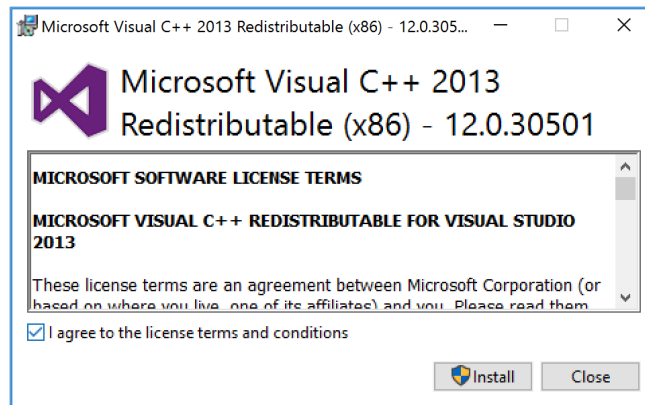

*which means .Net Framework 4 is not needed, if the computer already has or your system is windows10.*

for Microsoft visual C++ 2013 Redistributable:

Choose the download you want

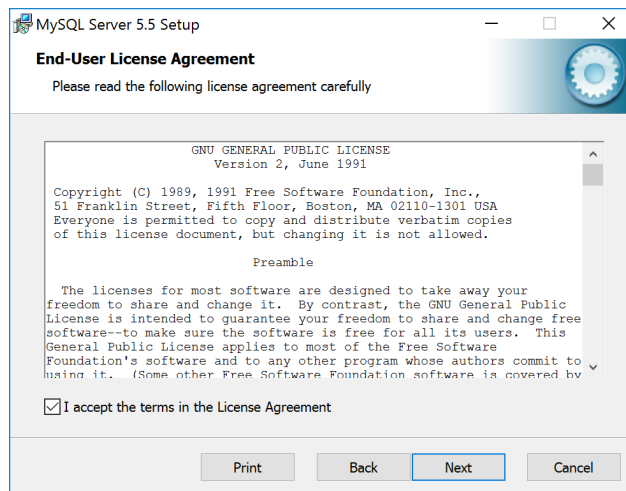

<input type="checkbox"/> File Name	Size
<input type="checkbox"/> vc_redist_arm.exe	1.4 MB
<input type="checkbox"/> vc_redist_x64.exe	6.9 MB
<input checked="" type="checkbox"/> vc_redist_x86.exe	6.2 MB

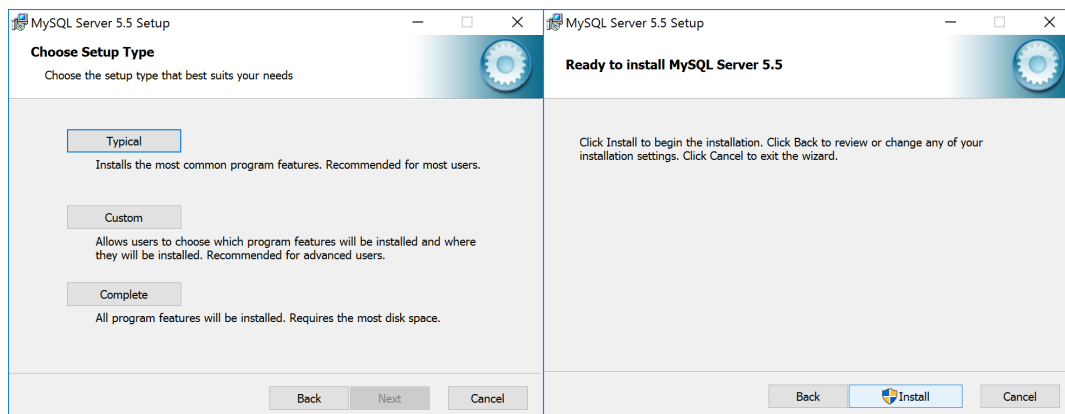

## 2. Install MySQL server:

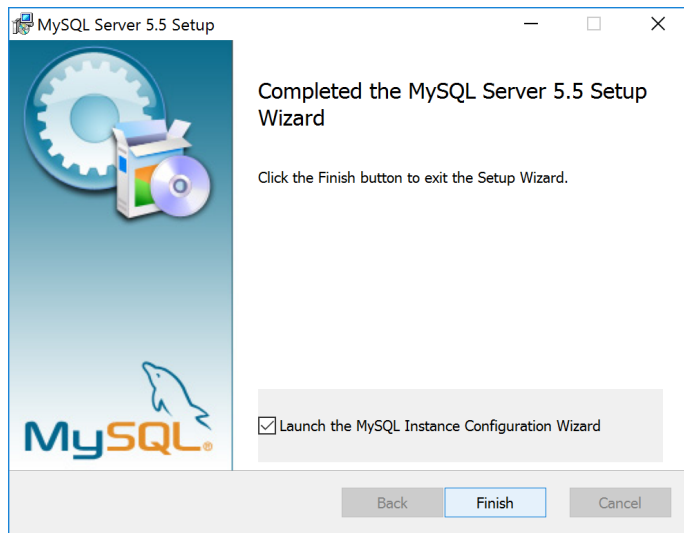

I download the *mysql-5.5.53-winx64.msi* for MySQL server;

After downloading, click to start install:

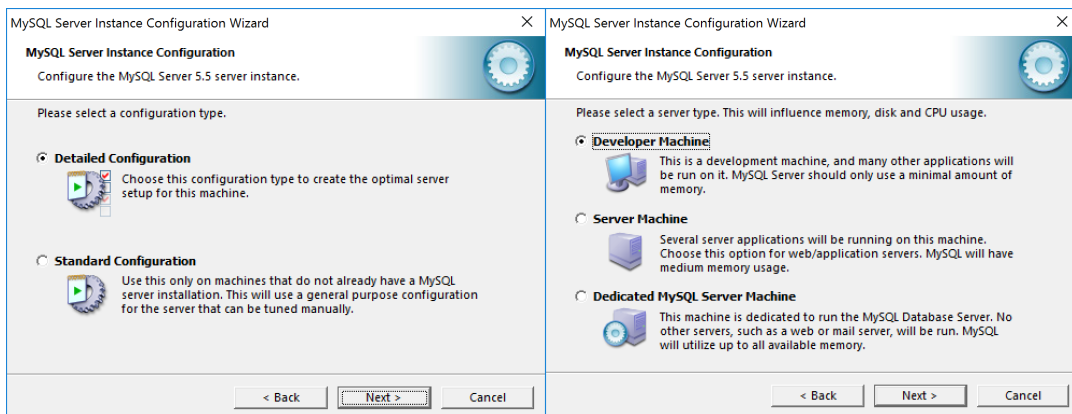

Type: recommend typical

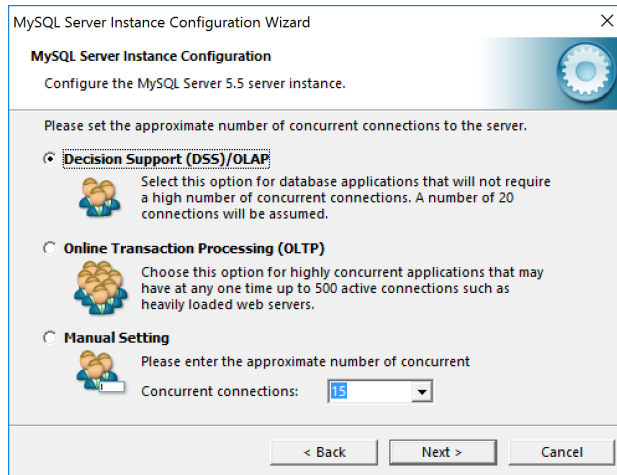

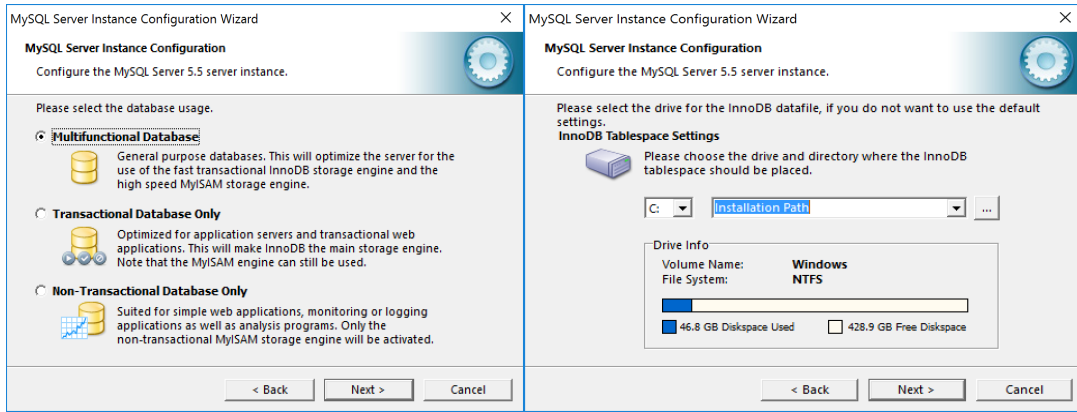

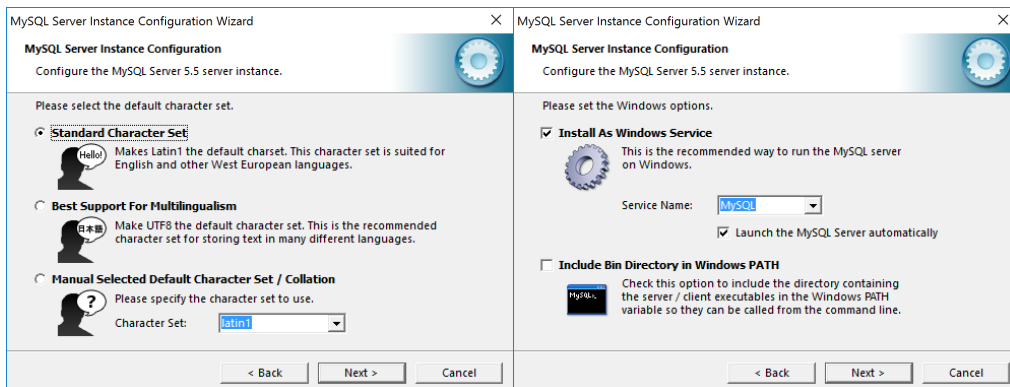

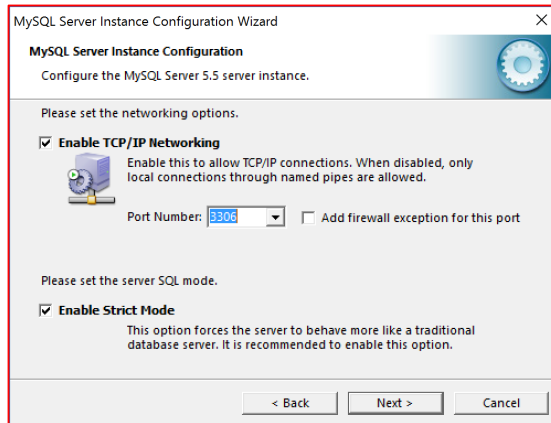

### 3.Configuration:

After installing the MySQL Server, a window will pop up for configuring the server.

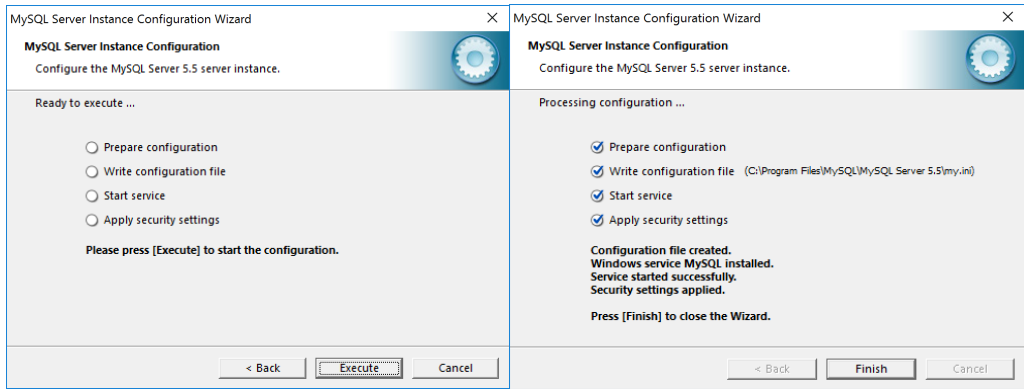

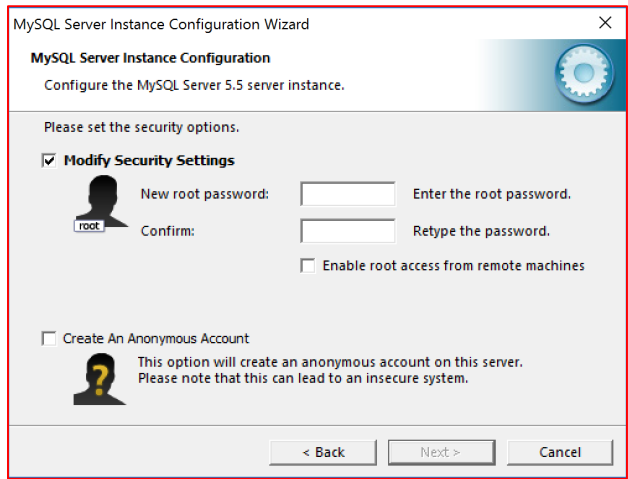

Set the Port number (please remember)

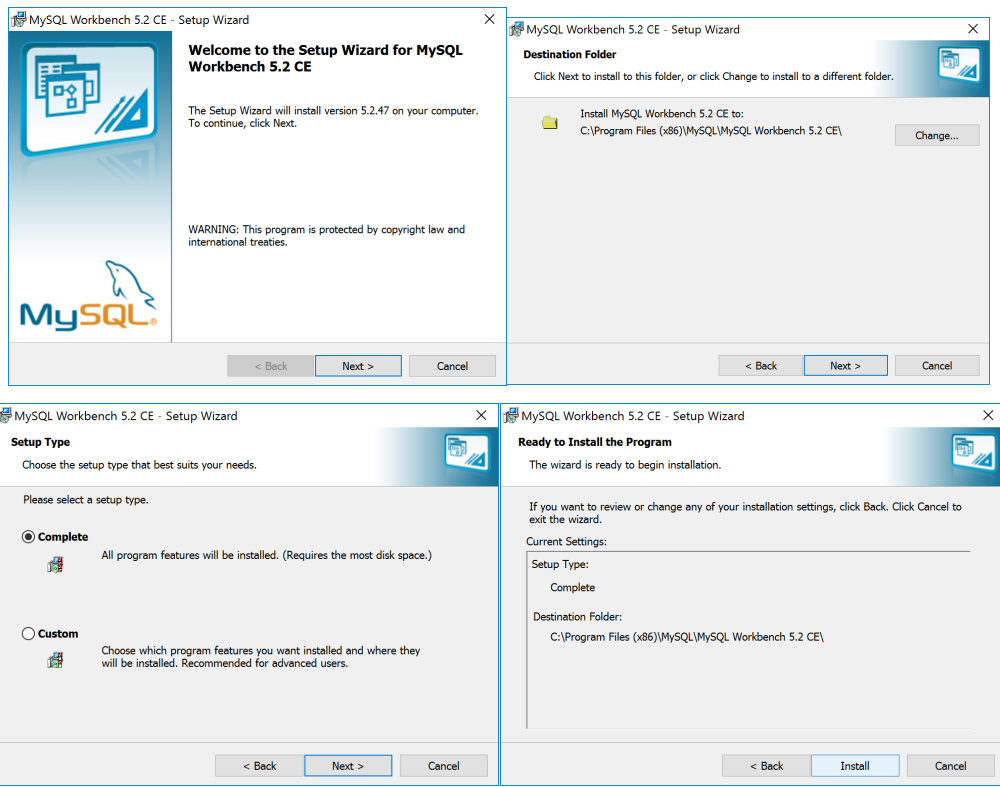

Set the root password which is used to connect the database server (please remember)

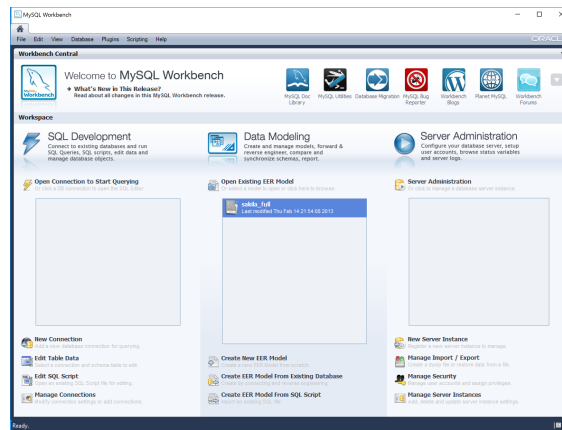

#### 4. Install MySQL Workbench:

click the downloaded .msi file for workbench to start install

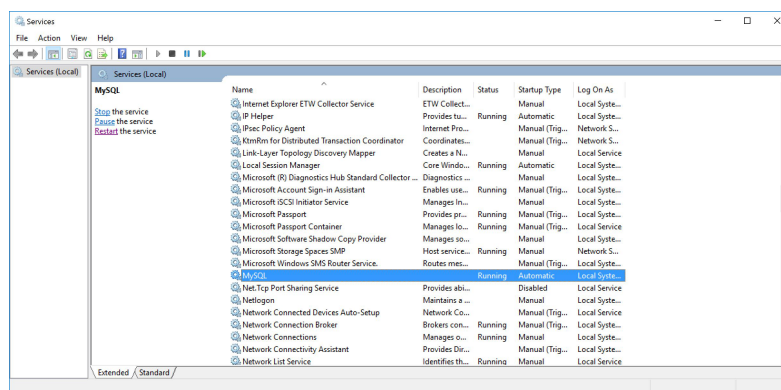

Install successfully:

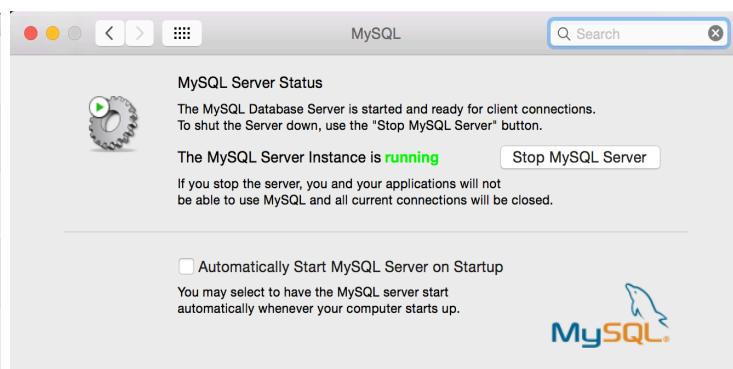

## 5.Test: Connecting MySQL Server via Workbench:

### Start MySQL Server

#### Windows

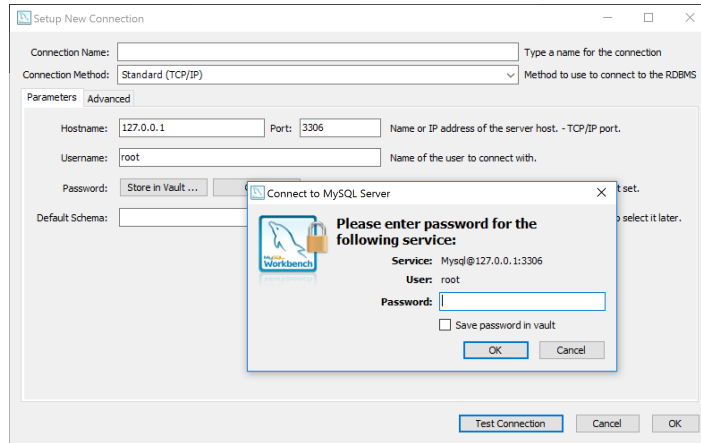

#### Mac

### Connect server via workbench:

Create a new connection on the workbench panel (Bottom Left or '+' mark);

Type the hostname (127.0.0.1 for local), Port, username (root) and password;

After successful connection, you will see the following interface with a test database on the left (or system database in Mac version).
